答案与解析

答案与解析

Q1

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use fractions and check the final result against the question.

Q2

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use ratio and check the final result against the question.

Q3

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use percentage and check the final result against the question.

Q4

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use standard form and check the final result against the question.

Q5

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use bounds and check the final result against the question.

Q6

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use expand and check the final result against the question.

Q7

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use factorise and check the final result against the question.

Q8

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use simplify and check the final result against the question.

Q9

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use linear/quadratic equations and check the final result against the question.

Q10

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use inequalities and check the final result against the question.

Q11

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use function notation and check the final result against the question.

Q12

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use domain and check the final result against the question.

Q13

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use range and check the final result against the question.

Q14

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use transformations and check the final result against the question.

Q15

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use linear/quadratic/cubic/reciprocal graphs and check the final result against the question.

Q16

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use gradient and check the final result against the question.

Q17

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use midpoint and check the final result against the question.

Q18

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use distance and check the final result against the question.

Q19

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use straight lines and check the final result against the question.

Q20

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use parallel and perpendicular lines and check the final result against the question.

Q21

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use angles and check the final result against the question.

Q22

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use polygons and check the final result against the question.

Q23

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use similarity and check the final result against the question.

Q24

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use congruence and check the final result against the question.

Q25

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use Pythagoras and check the final result against the question.

Q26

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use reflection and check the final result against the question.

Q27

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use rotation and check the final result against the question.

Q28

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use enlargement and check the final result against the question.

Q29

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use translation and check the final result against the question.

Q30

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use vector addition and scalar multiplication and check the final result against the question.

Q31

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use circle and check the final result

against the question.

Q32

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use sector and check the final result against the question.

Q33

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use prism and check the final result against the question.

Q34

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use cylinder and check the final result against the question.

Q35

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use cone and check the final result against the question.

Q36

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use tables and check the final result against the question.

Q37

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use averages and check the final result against the question.

Q38

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use cumulative frequency and check the final result against the question.

Q39

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use histograms and check the final result against the question.

Q40

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use tree diagrams and check the final result against the question.

Q41

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use sets and check the final result against the question.

Q42

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use matrices and check the final result against the question.

Q43

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use variation and check the final result against the question.

Q44

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use iterative methods and check the final result against the question.

Q45

State the relevant definition/formula, substitute consistently, show each algebraic step, and give the result with an appropriate unit or domain. For this topic, a complete answer must explicitly use modelling and check the final result against the question.
