AS 基本经济思想与资源配置 | Basic economic ideas and resource allocation

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q73 — indicative answer

A strong response accurately defines scarcity, links it to opportunity cost, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q74 — indicative answer

A strong response accurately defines opportunity cost, links it to positive statement, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q75 — indicative answer

A strong response accurately defines positive statement, links it to normative statement, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q76 — indicative answer

A strong response accurately defines normative statement, links it to PPC, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q77 — indicative answer

A strong response accurately defines PPC, links it to public good, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q78 — indicative answer

A strong response accurately defines public good, links it to scarcity, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q79 — indicative answer

A strong response accurately defines scarcity, links it to opportunity cost, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q80 — indicative answer

A strong response accurately defines opportunity cost, links it to positive statement, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q81 — indicative answer

A strong response accurately defines positive statement, links it to normative statement, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q82 — indicative answer

A strong response accurately defines normative statement, links it to PPC, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q83 — indicative answer

A strong response accurately defines PPC, links it to public good, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

AS 价格体系与微观经济 | The price system and the microeconomy

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q84 — indicative answer

A strong response accurately defines demand, links it to supply, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q85 — indicative answer

A strong response accurately defines supply, links it to PED, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q86 — indicative answer

A strong response accurately defines PED, links it to YED, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q87 — indicative answer

A strong response accurately defines YED, links it to XED, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q88 — indicative answer

A strong response accurately defines XED, links it to consumer surplus, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q89 — indicative answer

A strong response accurately defines consumer surplus, links it to demand, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q90 — indicative answer

A strong response accurately defines demand, links it to supply, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q91 — indicative answer

A strong response accurately defines supply, links it to PED, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q92 — indicative answer

A strong response accurately defines PED, links it to YED, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q93 — indicative answer

A strong response accurately defines YED, links it to XED, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q94 — indicative answer

A strong response accurately defines XED, links it to consumer surplus, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

AS 政府微观干预 | Government microeconomic intervention

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q95 — indicative answer

A strong response accurately defines externality, links it to merit good, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q96 — indicative answer

A strong response accurately defines merit good, links it to demerit good, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q97 — indicative answer

A strong response accurately defines demerit good, links it to indirect tax, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q98 — indicative answer

A strong response accurately defines indirect tax, links it to subsidy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q99 — indicative answer

A strong response accurately defines subsidy, links it to price ceiling, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q100 — indicative answer

A strong response accurately defines price ceiling, links it to externality, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q101 — indicative answer

A strong response accurately defines externality, links it to merit good, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q102 — indicative answer

A strong response accurately defines merit good, links it to demerit good, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q103 — indicative answer

A strong response accurately defines demerit good, links it to indirect tax, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q104 — indicative answer

A strong response accurately defines indirect tax, links it to subsidy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q105 — indicative answer

A strong response accurately defines subsidy, links it to price ceiling, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

AS 宏观经济 | The macroeconomy

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q106 — indicative answer

A strong response accurately defines GDP, links it to aggregate demand, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q107 — indicative answer

A strong response accurately defines aggregate demand, links it to aggregate supply, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q108 — indicative answer

A strong response accurately defines aggregate supply, links it to inflation, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q109 — indicative answer

A strong response accurately defines inflation, links it to unemployment, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q110 — indicative answer

A strong response accurately defines unemployment, links it to current account, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q111 — indicative answer

A strong response accurately defines current account, links it to GDP, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q112 — indicative answer

A strong response accurately defines GDP, links it to aggregate demand, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q113 — indicative answer

A strong response accurately defines aggregate demand, links it to aggregate supply, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q114 — indicative answer

A strong response accurately defines aggregate supply, links it to inflation, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q115 — indicative answer

A strong response accurately defines inflation, links it to unemployment, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q116 — indicative answer

A strong response accurately defines unemployment, links it to current account, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

AS 政府宏观干预 | Government macroeconomic intervention

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q117 — indicative answer

A strong response accurately defines fiscal policy, links it to monetary policy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q118 — indicative answer

A strong response accurately defines monetary policy, links it to supply-side policy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q119 — indicative answer

A strong response accurately defines supply-side policy, links it to budget deficit, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q120 — indicative answer

A strong response accurately defines budget deficit, links it to interest rate, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q121 — indicative answer

A strong response accurately defines interest rate, links it to policy conflict, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q122 — indicative answer

A strong response accurately defines policy conflict, links it to fiscal policy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q123 — indicative answer

A strong response accurately defines fiscal policy, links it to monetary policy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q124 — indicative answer

A strong response accurately defines monetary policy, links it to supply-side policy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q125 — indicative answer

A strong response accurately defines supply-side policy, links it to budget deficit, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q126 — indicative answer

A strong response accurately defines budget deficit, links it to interest rate, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q127 — indicative answer

A strong response accurately defines interest rate, links it to policy conflict, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

AS 国际经济问题 | International economic issues

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q128 — indicative answer

A strong response accurately defines absolute advantage, links it to comparative advantage, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q129 — indicative answer

A strong response accurately defines comparative advantage, links it to tariff, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q130 — indicative answer

A strong response accurately defines tariff, links it to quota, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q131 — indicative answer

A strong response accurately defines quota, links it to depreciation, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q132 — indicative answer

A strong response accurately defines depreciation, links it to Marshall-Lerner condition, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q133 — indicative answer

A strong response accurately defines Marshall-Lerner condition, links it to absolute advantage, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q134 — indicative answer

A strong response accurately defines absolute advantage, links it to comparative advantage, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q135 — indicative answer

A strong response accurately defines comparative advantage, links it to tariff, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q136 — indicative answer

A strong response accurately defines tariff, links it to quota, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q137 — indicative answer

A strong response accurately defines quota, links it to depreciation, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q138 — indicative answer

A strong response accurately defines depreciation, links it to Marshall-Lerner condition, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

A Level 价格体系与微观经济 II | The price system and the microeconomy A Level

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q139 — indicative answer

A strong response accurately defines marginal utility, links it to indifference curve, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q140 — indicative answer

A strong response accurately defines indifference curve, links it to marginal cost, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q141 — indicative answer

A strong response accurately defines marginal cost, links it to perfect competition, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q142 — indicative answer

A strong response accurately defines perfect competition, links it to oligopoly, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q143 — indicative answer

A strong response accurately defines oligopoly, links it to monopsony, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q144 — indicative answer

A strong response accurately defines monopsony, links it to marginal utility, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q145 — indicative answer

A strong response accurately defines marginal utility, links it to indifference curve, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q146 — indicative answer

A strong response accurately defines indifference curve, links it to marginal cost, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q147 — indicative answer

A strong response accurately defines marginal cost, links it to perfect competition, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q148 — indicative answer

A strong response accurately defines perfect competition, links it to oligopoly, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

A Level 政府微观干预 II | Government microeconomic intervention A Level

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q149 — indicative answer

A strong response accurately defines allocative efficiency, links it to productive efficiency, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q150 — indicative answer

A strong response accurately defines productive efficiency, links it to dynamic efficiency, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q151 — indicative answer

A strong response accurately defines dynamic efficiency, links it to Gini coefficient, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q152 — indicative answer

A strong response accurately defines Gini coefficient, links it to redistribution, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q153 — indicative answer

A strong response accurately defines redistribution, links it to government failure, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q154 — indicative answer

A strong response accurately defines government failure, links it to allocative efficiency, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q155 — indicative answer

A strong response accurately defines allocative efficiency, links it to productive efficiency, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q156 — indicative answer

A strong response accurately defines productive efficiency, links it to dynamic efficiency, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q157 — indicative answer

A strong response accurately defines dynamic efficiency, links it to Gini coefficient, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q158 — indicative answer

A strong response accurately defines Gini coefficient, links it to redistribution, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

A Level 宏观经济 II | The macroeconomy A Level

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q159 — indicative answer

A strong response accurately defines multiplier, links it to accelerator, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q160 — indicative answer

A strong response accurately defines accelerator, links it to output gap, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q161 — indicative answer

A strong response accurately defines output gap, links it to money supply, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q162 — indicative answer

A strong response accurately defines money supply, links it to Phillips curve, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q163 — indicative answer

A strong response accurately defines Phillips curve, links it to natural rate of unemployment, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q164 — indicative answer

A strong response accurately defines natural rate of unemployment, links it to multiplier, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q165 — indicative answer

A strong response accurately defines multiplier, links it to accelerator, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q166 — indicative answer

A strong response accurately defines accelerator, links it to output gap, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q167 — indicative answer

A strong response accurately defines output gap, links it to money supply, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q168 — indicative answer

A strong response accurately defines money supply, links it to Phillips curve, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

A Level 政府宏观干预 II | Government macroeconomic intervention A Level

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q169 — indicative answer

A strong response accurately defines discretionary policy, links it to automatic stabiliser, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q170 — indicative answer

A strong response accurately defines automatic stabiliser, links it to quantitative easing, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q171 — indicative answer

A strong response accurately defines quantitative easing, links it to crowding out, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q172 — indicative answer

A strong response accurately defines crowding out, links it to Laffer curve, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q173 — indicative answer

A strong response accurately defines Laffer curve, links it to policy mix, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q174 — indicative answer

A strong response accurately defines policy mix, links it to discretionary policy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q175 — indicative answer

A strong response accurately defines discretionary policy, links it to automatic stabiliser, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q176 — indicative answer

A strong response accurately defines automatic stabiliser, links it to quantitative easing, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q177 — indicative answer

A strong response accurately defines quantitative easing, links it to crowding out, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q178 — indicative answer

A strong response accurately defines crowding out, links it to Laffer curve, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

A Level 国际经济问题 II | International economic issues

A Level

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q179 — indicative answer

A strong response accurately defines terms of trade, links it to trade creation, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q180 — indicative answer

A strong response accurately defines trade creation, links it to trade diversion, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q181 — indicative answer

A strong response accurately defines trade diversion, links it to foreign direct investment, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q182 — indicative answer

A strong response accurately defines foreign direct investment, links it to economic development, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q183 — indicative answer

A strong response accurately defines economic development, links it to foreign aid, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q184 — indicative answer

A strong response accurately defines foreign aid, links it to terms of trade, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q185 — indicative answer

A strong response accurately defines terms of trade, links it to trade creation, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q186 — indicative answer

A strong response accurately defines trade creation, links it to trade diversion, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q187 — indicative answer

A strong response accurately defines trade diversion, links it to foreign direct investment, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q188 — indicative answer

A strong response accurately defines foreign direct investment, links it to economic development, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.
