依据 2026 课程大纲整理。非 Cambridge 官方出版物。

基本经济问题 | The basic economic problem | 答案册

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q1 — indicative answer

A strong response accurately defines scarcity, links it to choice, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q2 — indicative answer

A strong response accurately defines choice, links it to opportunity cost, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q3 — indicative answer

A strong response accurately defines opportunity cost, links it to factors of production, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q4 — indicative answer

A strong response accurately defines factors of production, links it to production possibility curve, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q5 — indicative answer

A strong response accurately defines production possibility curve, links it to economic growth, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q6 — indicative answer

A strong response accurately defines economic growth, links it to scarcity, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q7 — indicative answer

A strong response accurately defines scarcity, links it to choice, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q8 — indicative answer

A strong response accurately defines choice, links it to opportunity cost, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q9 — indicative answer

A strong response accurately defines opportunity cost, links it to factors of production, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q10 — indicative answer

A strong response accurately defines factors of production, links it to production possibility curve, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q11 — indicative answer

A strong response accurately defines production possibility curve, links it to economic growth, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q12 — indicative answer

A strong response accurately defines economic growth, links it to scarcity, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

6. 自学检查清单

我能不用中文提示，准确定义本单元至少 35 个英文术语。

我能区分变量的变动与曲线移动，并画出完整标注的图。

我能在计算后解释数值的经济含义，而不是只写答案。

我能写出至少两条完整因果链，每条包含中间环节。

我能针对短期/长期、弹性、规模、利益相关者作评价。

我能在结论中回答题目而非重复前文。

我已订正错题，并把错误归类为定义、应用、分析或评价。

资源配置 | The allocation of resources | 答案册

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q13 — indicative answer

A strong response accurately defines demand, links it to supply, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q14 — indicative answer

A strong response accurately defines supply, links it to equilibrium, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q15 — indicative answer

A strong response accurately defines equilibrium, links it to price elasticity of demand, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q16 — indicative answer

A strong response accurately defines price elasticity of demand, links it to price elasticity of supply, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q17 — indicative answer

A strong response accurately defines price elasticity of supply, links it to market failure, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q18 — indicative answer

A strong response accurately defines market failure, links it to demand, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q19 — indicative answer

A strong response accurately defines demand, links it to supply, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q20 — indicative answer

A strong response accurately defines supply, links it to equilibrium, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q21 — indicative answer

A strong response accurately defines equilibrium, links it to price elasticity of demand, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q22 — indicative answer

A strong response accurately defines price elasticity of demand, links it to price elasticity of supply, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q23 — indicative answer

A strong response accurately defines price elasticity of supply, links it to market failure, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q24 — indicative answer

A strong response accurately defines market failure, links it to demand, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

6. 自学检查清单

我能不用中文提示，准确定义本单元至少 35 个英文术语。

我能区分变量的变动与曲线移动，并画出完整标注的图。

我能在计算后解释数值的经济含义，而不是只写答案。

我能写出至少两条完整因果链，每条包含中间环节。

我能针对短期/长期、弹性、规模、利益相关者作评价。

我能在结论中回答题目而非重复前文。

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q25 — indicative answer

A strong response accurately defines money, links it to commercial bank, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q26 — indicative answer

A strong response accurately defines commercial bank, links it to household, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q27 — indicative answer

A strong response accurately defines household, links it to trade union, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q28 — indicative answer

A strong response accurately defines trade union, links it to productivity, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q29 — indicative answer

A strong response accurately defines productivity, links it to economies of scale, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q30 — indicative answer

A strong response accurately defines economies of scale, links it to money, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q31 — indicative answer

A strong response accurately defines money, links it to commercial bank, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q32 — indicative answer

A strong response accurately defines commercial bank, links it to household, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q33 — indicative answer

A strong response accurately defines household, links it to trade union, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q34 — indicative answer

A strong response accurately defines trade union, links it to productivity, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q35 — indicative answer

A strong response accurately defines productivity, links it to economies of scale, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q36 — indicative answer

A strong response accurately defines economies of scale, links it to money, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

6. 自学检查清单

政府与宏观经济 | Government and the macroeconomy | 答案册

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q37 — indicative answer

A strong response accurately defines economic growth, links it to unemployment, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q38 — indicative answer

A strong response accurately defines unemployment, links it to inflation, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q39 — indicative answer

A strong response accurately defines inflation, links it to fiscal policy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q40 — indicative answer

A strong response accurately defines fiscal policy, links it to monetary policy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q41 — indicative answer

A strong response accurately defines monetary policy, links it to balance of payments, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q42 — indicative answer

A strong response accurately defines balance of payments, links it to economic growth, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q43 — indicative answer

A strong response accurately defines economic growth, links it to unemployment, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q44 — indicative answer

A strong response accurately defines unemployment, links it to inflation, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q45 — indicative answer

A strong response accurately defines inflation, links it to fiscal policy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q46 — indicative answer

A strong response accurately defines fiscal policy, links it to monetary policy, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q47 — indicative answer

A strong response accurately defines monetary policy, links it to balance of payments, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q48 — indicative answer

A strong response accurately defines balance of payments, links it to economic growth, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q49 — indicative answer

A strong response accurately defines living standards, links it to GDP per head, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q50 — indicative answer

A strong response accurately defines GDP per head, links it to Human Development Index, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q51 — indicative answer

A strong response accurately defines Human Development Index, links it to poverty, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q52 — indicative answer

A strong response accurately defines poverty, links it to population, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q53 — indicative answer

A strong response accurately defines population, links it to development, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q54 — indicative answer

A strong response accurately defines development, links it to living standards, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q55 — indicative answer

A strong response accurately defines living standards, links it to GDP per head, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q56 — indicative answer

A strong response accurately defines GDP per head, links it to Human Development Index, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q57 — indicative answer

A strong response accurately defines Human Development Index, links it to poverty, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q58 — indicative answer

A strong response accurately defines poverty, links it to population, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q59 — indicative answer

A strong response accurately defines population, links it to development, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q60 — indicative answer

A strong response accurately defines development, links it to living standards, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

国际贸易与全球化 | International trade and globalisation | 答案册

5. 答案与解析

These are indicative answers, not exhaustive mark schemes. Each developed link must be economically logical.

Q61 — indicative answer

A strong response accurately defines specialisation, links it to comparative advantage, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q62 — indicative answer

A strong response accurately defines comparative advantage, links it to free trade, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q63 — indicative answer

A strong response accurately defines free trade, links it to protectionism, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Award method credit for $12 \div 6 = 2$; accept a sign change where the stated relationship requires it. The interpretation must name the variables and distinguish responsiveness from causation. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q64 — indicative answer

A strong response accurately defines protectionism, links it to exchange rate, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q65 — indicative answer

A strong response accurately defines exchange rate, links it to current account, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q66 — indicative answer

A strong response accurately defines current account, links it to specialisation, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q67 — indicative answer

A strong response accurately defines specialisation, links it to comparative advantage, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q68 — indicative answer

A strong response accurately defines comparative advantage, links it to free trade, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q69 — indicative answer

A strong response accurately defines free trade, links it to protectionism, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q70 — indicative answer

A strong response accurately defines protectionism, links it to exchange rate, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q71 — indicative answer

A strong response accurately defines exchange rate, links it to current account, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.

Q72 — indicative answer

A strong response accurately defines current account, links it to specialisation, and develops at least one complete causal chain. Credit a correctly labelled diagram or relevant numerical example where used. Evaluation should be conditional: distinguish short from long run, consider elasticities or institutional context, identify affected stakeholders, and end with a supported judgement. This is an indicative marking route; other economically valid, context-supported reasoning should be credited.
